Sequence 3789, Application US/09134001C

Extent No. 6380370

GENERAL INFORMATION:

TITLE DE INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO STAPHYLOCCOCCUS

TITLE OF INVENTION: EPIDERMIDIS FOR DIAGNOSTICS AND THERAPEUTICS

FILE REPERENCE: GTC-007

CURRENT APPLICATION NUMBER: US 60/064,964

PRIOR APPLICATION NUMBER: US 60/064,964

PRIOR APPLICATION NUMBER: US 60/055,779

PRIOR PLING DATE: 1997-11-08

PRIOR FILING DATE: 1997-11-08

PRIOR FILING DATE: 1997-14-08

DRIOR FILING DATE: 1997-16-14

NUMBER OF SEQ ID NOS: 5674

SEQ ID NO 3789

LENGTH: 323

TYPE: PRT

CORGANISM: Staphylococcus epidermidis

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1210, Application US/09710279
Patent No. 6703492
GENERAL INFORMATION:
APPLICANT: KINMERLY, WILLIAM JOHN
TITLE OF INVENTION: STAPHYLOCOCCUS EPIDERMIDIS NUCLEIC ACIDS AND PROTEINS
FILE REFERENCE: PU3480US
CURRENT APPLICATION NUMBER: US/09/710,279
CURRENT FILING DATE: 2000-11-09
PRIOR PILING DATE: 1999-11-09
NUMBER OF SEQ ID NOS: 4472
SOFTWARE: Patentin Ver. 2.1
SEQ ID NO 1210
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                   Gaps

; Sequence 2, Application US/08987691A
; Patent No. 6306387
; GENERAL INFORMATION:
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: Galan, Jorge E
TITLE OF INVENTION: ANTIGEN DELIVERY SYSTEM
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSER: Braman & Rogalskyj, LLP
STREET: P.O. BOX 352
CITY: Canandaigua
STREET: P.O. BOX 352
CITY: Canandaigua
STREET: P.O. BOX 352
COUNTRY: USA
ZIP: 14424-0352
COMPUTER: IEM PC COMPATIBLE
OPERALING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: PATENTIN Release #1.0, Version #1.30
CURRENT APPLICATION NUMBER: US/08/987,691A
FILING DATE: 09-NOV-1997
CLASSIFICATION NUMBER: US 60/047,955
FILING DATE: 29-MAY-1997
ATTORNEY/AGBNT INPORMATION:
NAME: Braman, SUSAN I
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.30
CURRENT APPLICATION DATA:
APPLICATION NUMBER: US/08/987,691A
FILING DATE: 09-NOV-1997
CLASSIFICATION: 514
PRIOR APPLICATION NUMBER: US 60/047,955
FILING DATE: 29-MAY-1997

GENERAL INFORMATION:

GENERAL INFORMATION:

APPLICANT: GARY BRETON

TITLE OF INVENTION: UNCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PROTEUS MIRABILL).

TITLE OF INVENTION: UDAGNOSTICS AND THERAPEUTICS

FILE REFERENCE: 2709.1002-001

CURRENT APPLICATION WHERE: US/99/543,681A

CURRENT PILING DATE: 2000-04-05

PRIOR RILING DATE: 1999-04-09

PRIOR FILING DATE: 1999-04-09

NUMBER OF SEQ ID NOS: 8344

SEQ ID NO 599

LENGTH: 252
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 16, Application US/09468253B

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                            RESULT 14

US-09-468-25B-14

i Sequence 14, Application US/09468253B

Sequence 14, Application US/09468253B

Patent No. 6750012

GENERAL INFORMATION:
APPLICANT GOUID-ROCHDERG, Bonnie
TITLE OF INVENITON: Method of Identifying a Psychotropic Agent Using
TITLE OF INVENITON: Differential Gene Expression
TITLE OF INVENITON: Differential Gene Expression
FILE REFERENCE: 1596-12-20

CURRENT APPLICATION NUMBER: US/09/468,253B

CURRENT APPLICATION NUMBER: 60/113,127

PRIOR FILING DATE: 1998-12-21

NUMBER OF SEQ ID NOS: 71

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 14

"noncogene 2:617-619(1988).

"FUNCTION: Component of the cytoplasmic fibrils of the nuclear pore complex implicated in nuclear protein import. Its amino terminus is involved in activation of oncogenic kinases.

"SUBCELLUIAR LOCATION: Cytoplasmic surface of the nuclear pore complex. The assembly of the NPC is a stepwise process in which Trp-containing peripheral structures assemble after other components, including p62.

"Trp-containing peripheral structures assemble after other components, including p62.

"Trp-containing peripheral structures assemble after other components, including p62.

"Trp-containing peripheral structures assemble after other brain, lower levels in heart, liver and kidney.

"Trp-containing the peripheral structure and kidney.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 1

ö Gaps . 0 Sequence 8, Application US/08271364A
Patent No. 5756334
GENERAL INFORMATION:
APPLICANT: PERLEX, FRANCINE B.
APPLICANT: SOUTHWORTH, MAURICE W.
TITLE OF INVENTION: RECOMBIRANT THEROWSTABLE DNA POLYMERASE
TITLE OF INVENTION: FROM ARCHAEBACTERIA
NUMBER OF SEQUENCES: 42
CORRESPONDENCE ADDRESS:
ADDRESSEE: NEW BRIGLAND BIOLABS, INC. DB 4; Length 88; 5; Indels WEDIUM TYPE: FLOPPY disk
